

**Listing of Claims:**

1. (Previously Presented) A payment system comprising:

a transaction device system comprising:

a transaction device associated with an account identifier, said account identifier including at least a first account identifier portion and a second account identifier portion,

said transaction device further including a transaction device database including a proxy account identifier storage area operable for storing a proxy account identifier, said proxy account identifier including said first account identifier portion,

said proxy account identifier storage area including a first proxy account identifier storage area and a second proxy account identifier storage area,

said second proxy account identifier storage area configured to store at least said first account identifier portion, and

said transaction device operable to provide said proxy account identifier including said first account identifier portion to an account identifier provider system; and

an account identifier provider system in communication with said transaction device for receiving said proxy account identifier including said first account identifier portion,

said account provider system operable to associate said first account identifier portion to said account identifier, said account identifier being associated with a transaction account, and

said account identifier provider system operable to receive said first account identifier portion and provide the corresponding account identifier to an account identifier provider server for transaction completion.

2. (Previously Presented) A system according to claim 1, wherein said account identifier provider system is operable to provide said account identifier to said account identifier provider server in accordance with said first account identifier portion.

3. (Previously Presented) A system according to claim 2, wherein said account identifier provider system is operable to generate said second account identifier portion in

accordance with a predetermined algorithm operated on said first account identifier portion, said account identifier provider system is operable to provide said account identifier to said account identifier provider server in accordance with said first account identifier portion and said generated second account identifier portion.

4. (Previously Presented) A system according to claim 2, wherein said account identifier provider system further includes an account identifier provider database, said account identifier provider database operable to store said account identifier, wherein said account identifier provider system is operable to locate said stored account identifier in accordance with a predetermined algorithm operated on said first account identifier portion.

5. (Previously Presented) A system according to claim 2, wherein said account identifier provider system further includes an account identifier provider database, said account identifier provider database operable to store said second account identifier portion, wherein said account identifier provider system is operable to locate said stored second account identifier portion in accordance with a predetermined algorithm operated on said first account identifier portion, said account identifier provider system is operable to provide said account identifier to said account identifier provider server in accordance with said first account identifier portion and said located second account identifier portion.

6. (Previously Presented) A system according to claim 1, further including a merchant system in communication with said transaction device system, said transaction device system operable to provide said proxy account identifier to said merchant system, said merchant system in further communication with said account identifier provider system, said merchant system operable to provide said proxy account identifier including said first account identifier portion to said account provider system.

7. (Original) A system according to claim 6, wherein said transaction device system is operable to provide said proxy account identifier in a merchant system recognizable format.

8. (Original) A system according to claim 6, further comprising a transaction device

reader in communication with said transaction device system, said transaction device reader in further communication with said merchant system, said transaction device reader operable to receive said proxy account identifier and to provide said proxy account identifier to said merchant system.

9. (Original) A system according to claim 7, wherein said proxy account identifier is in International Standards Organization (ISO) compatible magnetic stripe format.

10. (Previously Presented) A system according to claim 7, wherein said proxy account identifier includes said first account identifier portion in at least one track of an ISO compatible magnetic stripe format.

11. (Previously Presented) A system according to claim 1, wherein said transaction device is operable to provide said proxy account identifier including said first account identifier portion to an account identifier provider system in a contactless transmission medium.

12. (Original) A system according to claim 11, wherein said contactless transmission medium is radio frequency.

13. (Original) A method of transmitting data for transaction completion comprising:  
receiving a proxy transaction device account identifier, wherein the proxy transaction device identifier includes at least one portion of a transaction device identifier associated with a transaction account;  
providing a transaction account identifier in accordance with a portion of the proxy transaction device identifier, the portion of the proxy transaction device identifier corresponding to a portion of the transaction account identifier; and  
correlating the transaction account identifier with a transaction account for use in satisfying a transaction.

14. (Original) A method according to claim 13, further including receiving the proxy transaction device identifier in International Standards Organization magnetic stripe format,

wherein the proxy transaction device identifier includes at least a first proxy identifier portion and a second proxy identifier portion, wherein at least the first proxy identifier portion includes a portion of transaction account identifier.

15. (Original) A method of transmitting data for transaction completion comprising:
  - providing a transaction device associated with a proxy account identifier, the proxy account identifier having at least a first proxy account identifier portion;
  - providing a database for storing the proxy account identifier;
  - associating the first proxy account identifier portion with a transaction account identifier; the transaction device identifier including first and second transaction account identifier portions;
  - storing the first transaction account identifier portion in the first proxy account identifier portion; and
  - providing the first transaction account identifier portion to a transaction account provider for use in determining the transaction account identifier for use in completing a transaction.
